Introduction

This document describes integration with Okta as the identity provider.

For information on configuring Okta for SAML SSO, refer to the following article.

https://help.okta.com/en/prod/Content/Topics/Apps/Apps_App_Integration_Wizard_SAML.htm

Note that the developer edition of Okta was used for demonstration purposes.

Adding a SAML Application

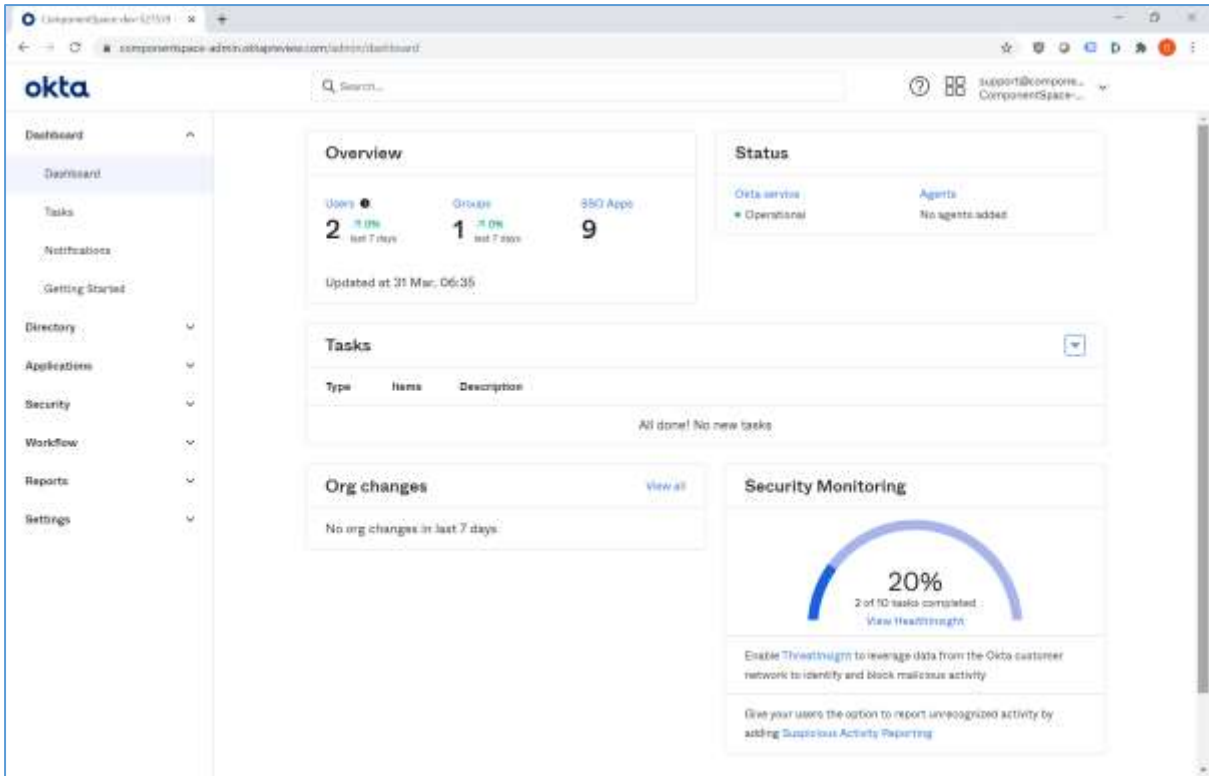

Login to Okta as an administrator.

Switch from the Developer Console to the Admin Console by selecting the Developer Console > Classic UI link in the top left corner.

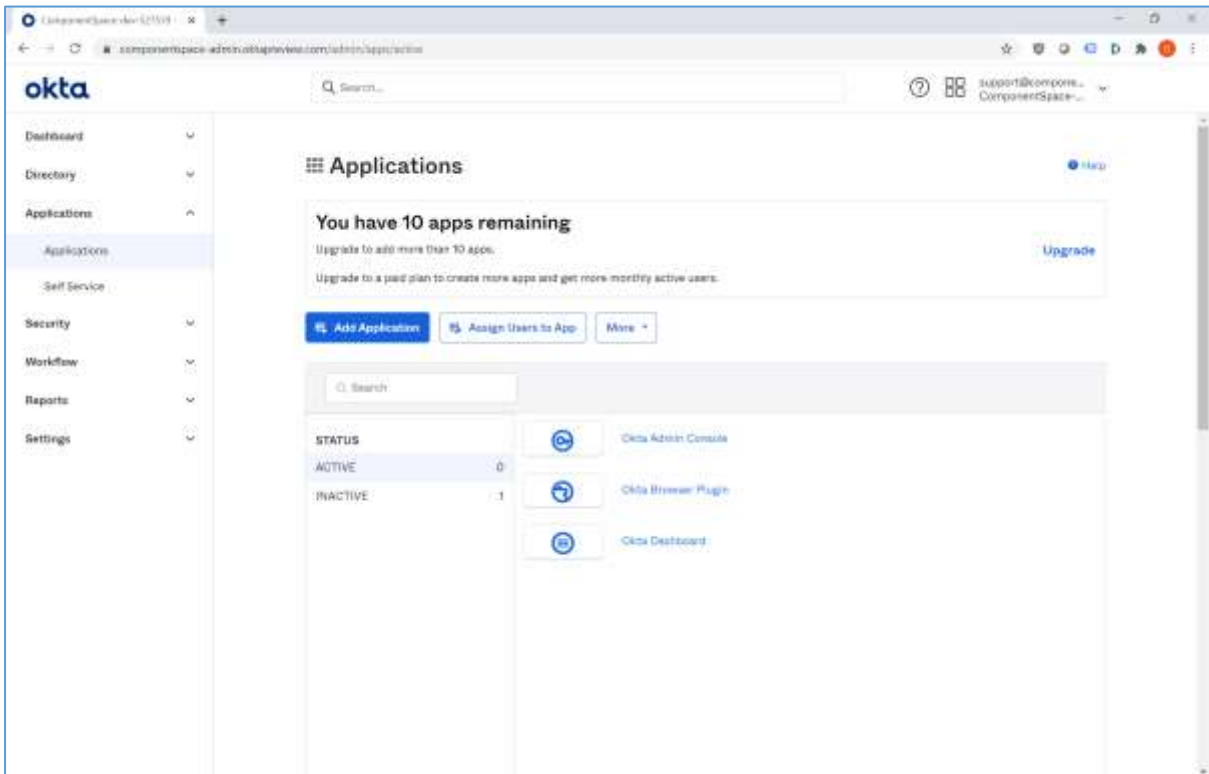

Select Applications from the menu bar.

ComponentSpace SAML for ASP.NET Okta Integration Guide

Click the Add Application button.

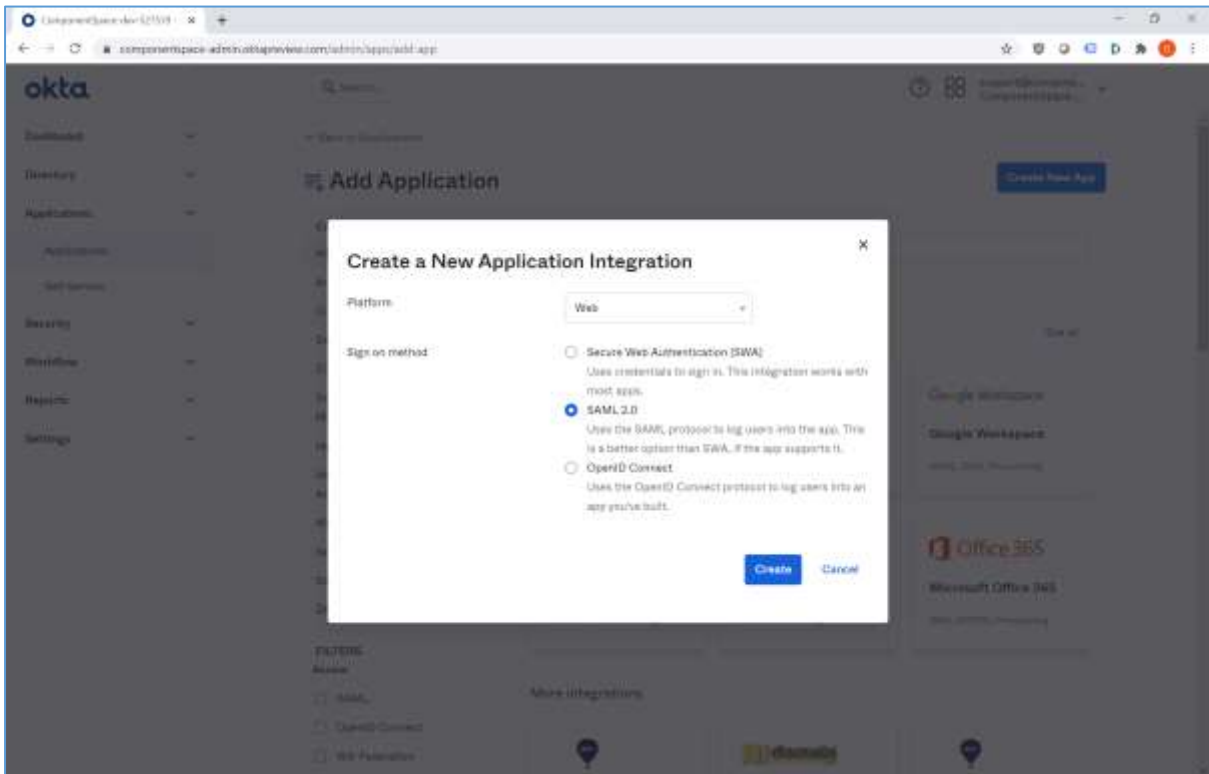

Click the Create New App button.

ComponentSpace SAML for ASP.NET Okta Integration Guide

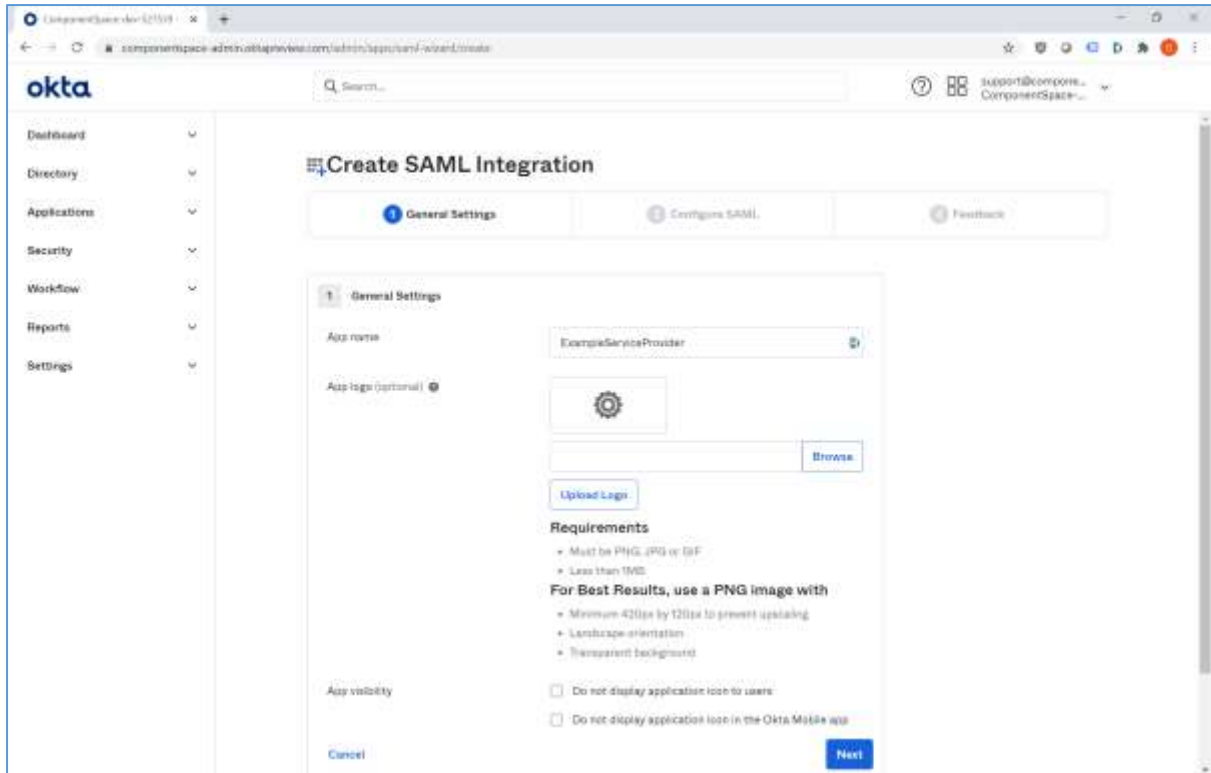

Specify Web as the platform and SAML 2.0 as the sign-on method.

Specify an app name. This is for display purposes only.

ComponentSpace SAML for ASP.NET Okta Integration Guide

Specify the assertion consumer service URL as the single sign-on URL.

For example:

<https://localhost:44360/SAML/AssertionConsumerService>

The same URL should be used for the recipient URL and destination URL.

Specify the service provider name as the audience URI.

For example:

<https://ExampleServiceProvider>

Relay state is not required.

The name ID format is unspecified.

The Okta username is used.

Attribute and group attribute names are not required.

ComponentSpace SAML for ASP.NET Okta Integration Guide

The screenshot shows the Okta 'Create SAML Integration' wizard in the 'Configure SAML' step. The 'SAML Settings' section is active, showing the 'General' tab. The 'Single sign on URL' field is set to 'https://localhost:44360/SAML/AssertionConsumerService'. The 'Audience URI (SP Entity ID)' field is set to 'https://ExampleServiceProvider'. The 'Name ID format' is set to 'Unspecified'. The 'Application username' is set to 'Okta username'. The 'Update application username on' dropdown is set to 'Create and update'. A 'Show Advanced Settings' link is visible at the bottom right of the form. On the right side, there is a 'What does this form do?' section and a 'Where do I find the info this form needs?' section. The 'Okta Certificate' section includes a 'Download Okta Certificate' button.

Click the Show Advanced Settings link.

Enable single logout.

Specify the single logout URL.

For example:

<https://localhost:44360/SAML/SingleLogoutService>

Specify the SP issuer. This is the name of the service provider.

For example:

<https://ExampleServiceProvider>

Upload the service provider certificate.

For example:

Sp.cer

The screenshot shows the Okta Admin console interface. The left sidebar contains navigation options: Dashboard, Directory, Applications, Security, Workflow, Reports, and Settings. The main content area is titled 'Configure SAML' and includes a search bar and a user profile dropdown. The settings are organized into sections: 'Response' (Signed), 'Assertion Signature' (Signed), 'Signature Algorithm' (RSA-SHA256), 'Digest Algorithm' (SHA256), 'Assertion Encryption' (Unencrypted), 'Enable Single Logout' (checked), 'Single Logout URL' (https://localhost:44360/SAML/SingleLogoutService), 'SP Issuer' (https://ExampleServiceProvider), 'Signature Certificate' (undefined (C:\www\ap.com) with a 'Browse' button and an 'Upload Certificate' button), 'Assertion Issuance Hook' (None (disabled)), 'Authentication context class' (PasswordProtectedTransport), and ' Honor Force Authentication' (Yes). A 'Hide Advanced Settings' link is visible in the top right.

Click the Next button, indicate this is an internal app, and click the Finish button.

The screenshot shows the 'Create SAML Integration' feedback form in the Okta Admin console. The form is titled 'Create SAML Integration' and has three steps: 1. General Settings, 2. Configure SAML, and 3. Feedback. The current step is 'Feedback'. The form asks 'Help Okta Support understand how you configured this application' and 'Are you a customer or partner?'. The user has selected 'I'm an Okta customer adding an internal app'. Below this, there is a section for 'App type' with a checked option 'This is an internal app that we have created'. There are 'Previous' and 'Finish' buttons. A help text box on the right explains the purpose of the form. The footer contains copyright information, privacy policy, version (2021.05.3), Open Project Call (URL), status (stg), download Okta Plugins, and feedback links.

View the setup instructions or download the identity provider metadata. This information will be required when configuring the service provider.

Select the Assignments link.

Assign users or groups to the application. Only users directly assigned or assigned through group membership may SSO to the application.

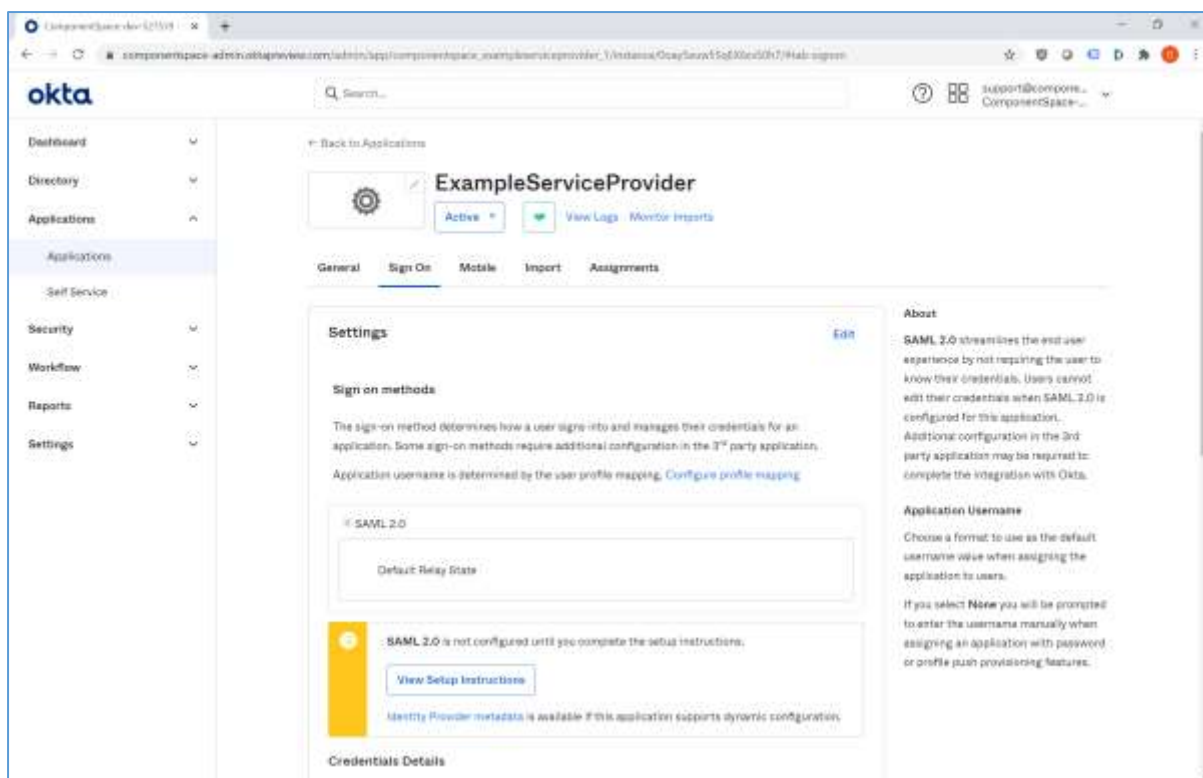

The application is now configured in Okta for SAML SSO.

Service Provider Configuration

The service provider must be configured with Okta as a partner identity provider.

The Okta SAML configuration is available using the Sign On link for the application.

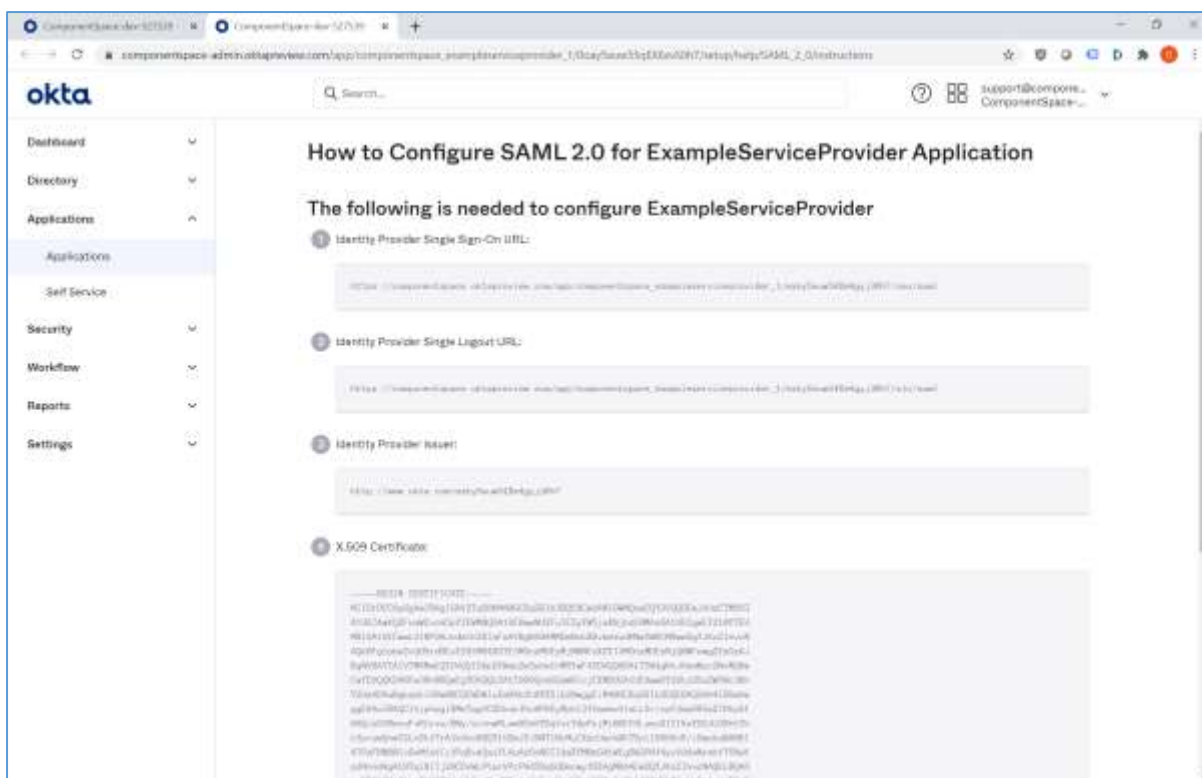

There are two options for setting up the partner identity provider configuration in the example service provider's SAML configuration.

The first option is to download Okta's SAML metadata and import this into the example service provider's SAML configuration. Please refer to the SAML Metadata Guide for more information.

The second option is to manually add a partner identity provider configuration using the information provided by Okta.

The identity provider single sign-on and single logout URLs are self-explanatory. The identity provider issuer corresponds to the partner identity provider name. The X.509 certificate is the partner certificate.

The following partner identity provider configuration is included in the example service provider's SAML configuration.

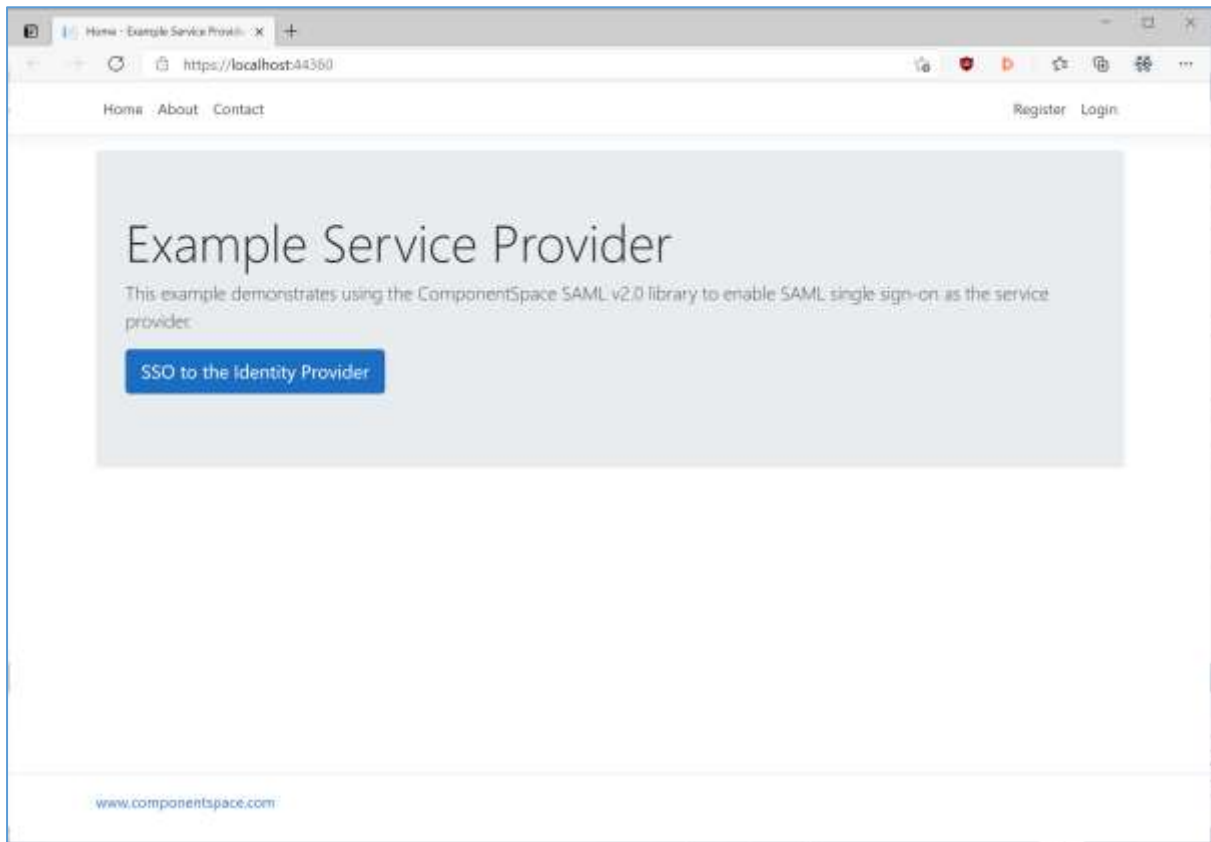

```
<PartnerIdentityProvider
  Name="http://www.okta.com/exky5euw54Xm4gyj30h7"
  Description="Okta"
  SignAuthnRequest="true"
  SignLogoutRequest="true"
  SignLogoutResponse="true"
  SingleSignOnServiceUrl=
  "https://componentspace.oktapreview.com/app/componentspace_exampleServiceProvider_1/ex
  ky5euw54Xm4gyj30h7/sso/saml"
  SingleLogoutServiceUrl=
  "https://componentspace.oktapreview.com/app/componentspace_exampleServiceProvider_1/ex
  ky5euw54Xm4gyj30h7/slo/saml">
  <PartnerCertificates>
    <Certificate FileName="Certificates\okta.cer"/>
  </PartnerCertificates>
</PartnerIdentityProvider>
```

Ensure the PartnerName specifies the correct partner identity provider.

```
<add key="PartnerName" value="http://www.okta.com/exky5euw54Xm4gyj30h7"/>
```

SP-Initiated SSO

Browse to the example service provider and click the button to SSO to the identity provider.

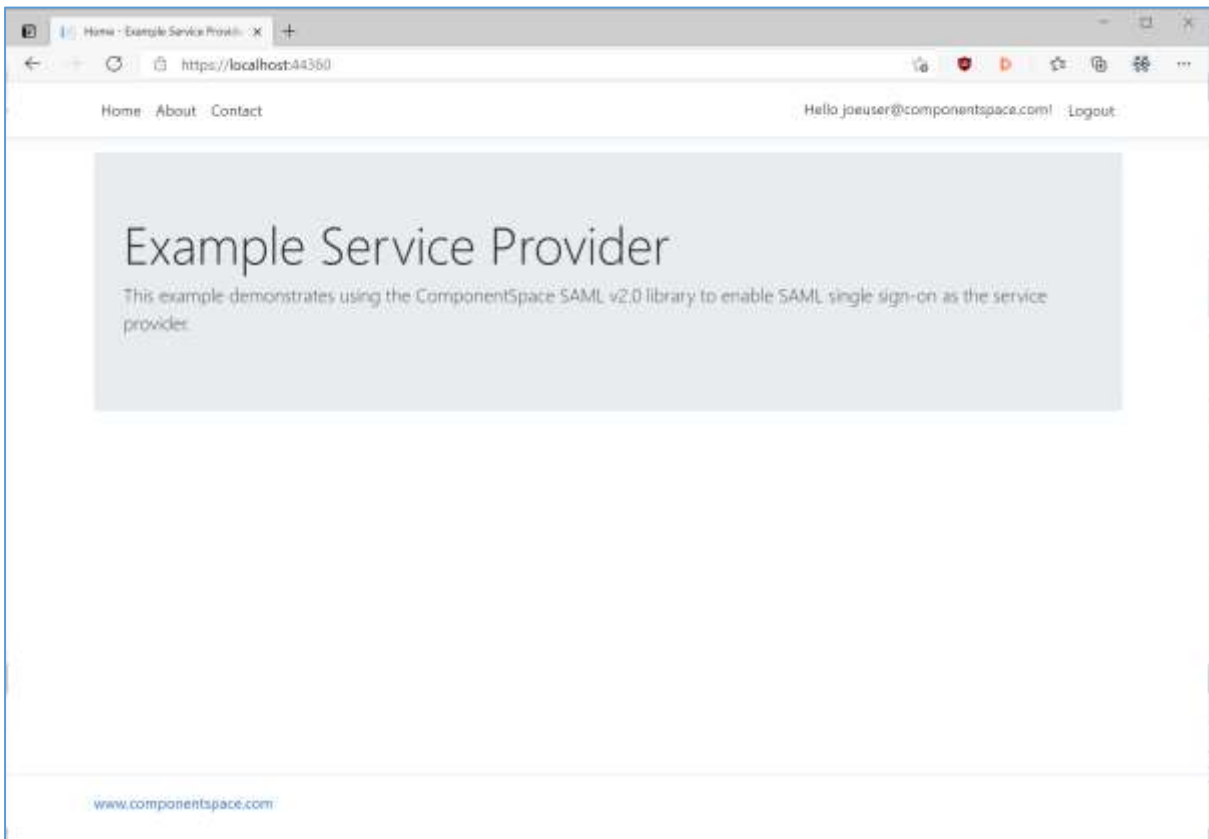

Login to Okta.

ComponentSpace SAML for ASP.NET Okta Integration Guide

The user is automatically logged in at the service provider.

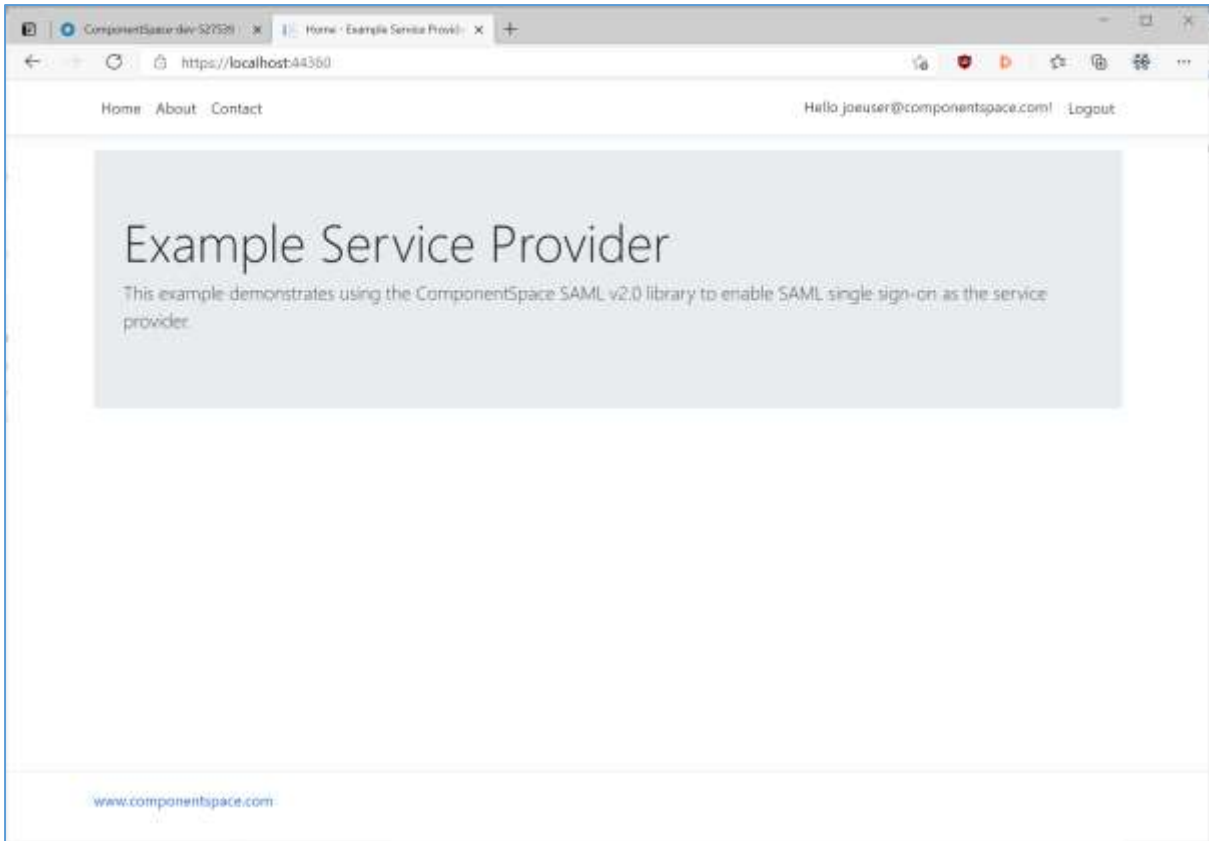

IdP-Initiated SSO

Login to Okta.

Click the ExampleServiceProvider button.

The user is automatically logged in at the service provider.

SAML Logout

Okta supports SP-initiated SAML logout only.

If logged into a service provider and the user logs out from Okta, no SAML logout request is sent to the service provider.

Troubleshooting

Most issues result from configuration mismatches. Ensure that the Okta configuration and the service provider configuration are consistent with each other.

The Okta system log may contain additional information.

ComponentSpace SAML for ASP.NET Okta Integration Guide

The screenshot displays the Okta System Log interface. At the top, there is a search bar and a navigation menu on the left. The main content area is titled "System Log" and includes a date range filter from 03/27/2021 00:00:00 to 04/03/2021 23:59:59. Below the filter is a search bar and a bar chart showing the count of events over time. A table below the chart lists recent events with columns for Time, Actor, Event Info, and Targets.

Time	Actor	Event Info	Targets
Apr 03 09:24:41	ComponentSpace Support: [User]	User accessing Okta admin app: success	ComponentSpace Support: [App/Dev]
Apr 03 09:24:41	Okta Administration: [PublicClientApp]	OIDC access token is granted: success	[User] Access Token: [access_token]
Apr 03 09:24:41	ComponentSpace Support: [User]	User single sign on to app	Okta Admin Console: [App/Instance]
